OUR DIECASTING CREDENTIALS

WORLD CLASS MANUFACTURING

For well over a century Lupton & Place has been at the forefront of the European diecasting industry.

A family run business with a highly skilled workforce of almost 150 people, some from three generations of the same family, **Lupton & Place** continues to develop and grow with the industries it serves. Capable of producing over 2,000,000 castings per year currently servicing a diverse range of clients throughout Europe, the company has recently added an extra 1000 sq. meter factory to guarantee open capacity supply for more demanding projects.

For many of our customers, the reason they choose to deal with **Lupton & Place** is as much to do with our support services as the diecastings themselves. Over the last decade we have forged strong relationships with several low cost economies, including China and India. We can if required source, manage and quality control price sensitive projects from design to delivery.

Please look carefully at this brochure and our website www.lupton-place.co.uk and you will find a company with the skills, capacity and service ethic you have been searching for.

SERVICES OFFERED

- Design advice and prototyping
- Aluminium gravity and pressure diecasting
- CNC machining
- Real time X Ray
- Special finishes
- Complete sub-assemblies
- Toolmaking both UK and via low cost overseas providers
- Diecasting management and control via low cost offshore providers

Certificate No FM 22097

Lupton & Place has, over the decades, been at the leading edge of diecasting technology and production developments, that's why we have developed particular strengths in the automotive and defence industries. The reason that major organisations trust **Lupton & Place** with important positions in their supply chain is our ability to get involved at the design stage and see the project through to a cost effective solution, meeting all of the clients quality, logistical and cost requirements.

You can often judge a company's quality by the company it keeps. **Lupton & Place** are delighted to count among their many customers the worlds leading automotive brands, such as: BMW, Toyota, Saab, Jaguar and General Motors. On the commercial vehicle side the names are just as impressive, including: Scania and Iveco.

Our defence work includes specialist castings for the US military.

Our general diecasting work, covers the complete spectrum of manufacturing industry, including: marine, lighting, electronics, office furniture and hydraulics.

As part of our total service offering we are also able to supply complete sub assemblies if required.

We also have the right credentials and accreditations to ensure that we can work for the very best companies. Our desire to become a world class manufacturing partner requires that we observe and manage all key performance indicators enabling our progression from **ISO9000 to ISO9001:2000 to TS16949.**

A DESIRE TO SUCCEED

A DESIRE TO SUCCEED

A well equipped skilled workforce producing over 1200 tonnes of castings per annum, with a level of quality few in the industry can match

Aluminium Pressure Diecasting

It can never be just about the numbers, without the correct level of investment, systems and quality control nothing is achieved. At **Lupton & Place** we have everything in place.

A policy of continuous development has kept **Lupton & Place** at the leading edge of diecasting technology for decades. This programme of investment has seen the development of one of the industry's best equipped CNC foundries, equipped with Buhler Real Time Closed Loop Control diecasting machines for unbeatable repeatability. Cutting edge CNC diespraying and dosing furnace technology ensures overall process rigidity giving superior casting integrity, reduced wall sections and maximum cost effectiveness.

Gravity Diecasting

Our considerable investment in tilt-gravity plant and technology, linked to years of experience in casting, ensures cost-effectiveness and product consistency through effective process control. The same combination of plant and skills also allows the use of a variety of alloys without limiting batch quantities. A wide range of product sizes can easily be made using sand cores for internal profiles where required.

THE FINISHING TOUCH

Machining and finishing to your exact requirements

Our continuous development programme is very evident in our machining department. Our aim is to produce castings which are totally compatible with our customers' final usage.

Special purpose machining, CNC turning and milling, trimming, ball burnishing, shot blasting, multi head drilling and tapping are all carried out in-house. We are also able to provide a wide range of surface finishes from powder coating to plating to suit the final requirement of the client.

THE FINISHING TOUCH

FINISHED ASSEMBLIES

SERVICE - THE SECRET INGREDIENT

When a component solution is not the answer

For some clients the ability to supply quality components is, in itself, not enough. To meet the clients needs, **Lupton & Place** are often required to undertake the assembly and testing process, delivering under just in time conditions, direct to the production line.

If you have a requirement that your current supplier is unable to meet, why not contact **Lupton & Place** direct on **01282 422361**

SERVICES OFFERED

- Toolmaking both UK and via low cost overseas providers
- Diecasting management and control via low cost offshore providers

For any company to be successful for the length of time **Lupton & Place** has been in business there must be an extra dimension to their activities – that extra dimension is service, service and more service.

At **Lupton & Place** our commitment to service is total. With on-site X-Ray, spectrographic analysis, CNC Metrology and full integrated process monitoring we can provide all the skills and technology our clients need.

More importantly, we match the technology with a willingness to get involved; to become an integral part of our clients supply process. With the aid of cost analysis and value engineering process we regularly exceed the demands and expectations of our customers by suggesting the ideal solution prior to the commencement of production.
